About me

Hi!

My name is Linus Håkansson and I am a passionate developer with a love for creating and exploring.

For almost two years I have been working as a C# .NET developer, focused mainly on C#, MVC, JavaScript and MariaDB/MySQL.

When I am not working on building websites, you will often find me at the gym or in some sports venue.

My journey in IT began when I was 14-15 years old and built my first computer at home together with my brother. Since then, I have been hooked and love diving into new technologies and solving problems.

Besides computers, technology, and sports, I am also a big nature lover. I enjoy spending time outdoors. These experiences help me stay inspired and creative.

I created this website to share my projects, my thoughts, and to give you a better picture of who I am as a person.

I hope you find something interesting here and do not hesitate to contact me if you want to know more or just say hi!

Experience

Infobric Hyrma AB - Software Developer. Sweden

At Infobric Hyrma I work as a software developer, developing the software used in the Hyrma platform.

My work is mainly focused on C#, MVC, JavaScript and MariaDB/MySQL.

A typical day involves coding and following an agile workflow with sprints, daily standups and other agile practices, always following best practices.

Skolon AB - Fullstack Developer (Internship). Östra piren Karlshamn, Sweden

During one of my internships, I worked as a fullstack web developer at Skolon AB.

Technologies that I further developed during my time at Skolon included:

Java 17 and Spring Boot

JavaScript and Vue.js (Options API)

HTML and CSS

MySQL

Postman

Table Plus

Git

Bitbucket

Wrike

A typical day could involve a standup meeting, going through what needed to be done for the day for each specific person, receiving tickets via Wrike, and then carrying out the tasks for the day or days. This could range from finding bugs to implementing entirely new features.

When the task was completed and commits were sent to Bitbucket, there was always a code review where I learned a lot through constructive criticism.

Saab AB - IT Security Specialist (Internship). Kockums Karlskrona, Sweden

During my education as a Java developer, I managed to get a foot in the door at Saab Kockums in Karlskrona, where I worked with IT security under an IT security architect.

I worked with tools like Jira and other internal tools that Saab AB could offer.

We had daily standups, and I got to learn about various information security principles and tactics.

Due to the security classification, I cannot go into much detail.

Bredåkra - Seasonal Employment, Green Spaces. Bredåkra Kallinge, Sweden

I worked in park management and took care of both park work (green spaces) and burial services, such as covering both earth graves with coffins and urn placements.

The use of various machines was common, such as Walker mowers and Avant.
